

QUALITY POLICY

R. Moore and Sons (RMS) is a world-class company providing a vital link in the supply chain for OEMs and major repairers. RMS partner with these organisations as we undertake extensive component remanufacturing and maintenance programs for our customers. The service RMS offers is elite, with a commitment to repeatable precision and reliability.

RMS is resourceful, innovative and collaborative. Our staff are empowered to take part in the engineering thought-process to drive new solutions for our customers. Ideas are thoroughly explored and assessed, without the fear of blame or failure. This has fostered a culture of continual learning, ensuring the RMS team is knowledgeable, experienced, forward-thinking and solutions focused.

The company and our staff work closely with a trusted network of suppliers, specialty machining manufacturers and like-minded companies internationally, engaging in an open dialogue about industry trends and technological advancements. This network of collaborators is vital in enabling the RMS team to explore, identify and implement industry best practice in the endeavour of providing a repeatable quality product to our customers.

RMS are committed to the continual improvement of our quality management system, and satisfying applicable requirements including ISO 9001:2015.

ENVIRONMENTAL POLICY

Critical regeneration work we undertake support our clients to be environmentally conscious by allowing engine components to have multiple lifecycles. RMS also adopts green practices within our operations to reduce our footprint.

Our Clients & the Environment

Diesel and gas engine regeneration is a comprehensive industrial process that is now a key sustainability practice embraced by many companies worldwide.

It offers a cost-effective, environmentally sound alternative to buying new.

As well as supporting our clients to improve their bottom line, it also lowers their overall environmental impact, assisting them to meet the stringent environmental standards of their industry.

We're proud to be able to regenerate engine components to the specifications of the original manufacturer with an aim of reducing emissions as they are recycled back into production.

The alternative is a new component would need to be created. The manufacturing of new components takes a significant amount of energy and contributes to greenhouse gas emissions.

Recycling components within Australia drastically reduces the environmental impact and carbon emissions that results through the international shipping of components.

RMS & the Environment

Regeneration is inherently a 'green' activity. It's what we do.

We are committed to minimising the impact on our environment and the prevention of pollution while regenerating components for a sustainable industry and the wider community.

We make a commitment to fulfil our compliance obligations and to continually improve our environmental management system to enhance environmental performance.
