

27 August 2021

Dear Stuart and R. Moore & Sons Team,

Thank you for the dedication and professionalism displayed while rectifying the crankshaft from HMAS Hobart. This was a task put upon Penske Australia to demonstrate its ability to perform an activity that some stated could not be achieved. Penske committed to the task knowing it had the full support of R. Moore & Sons to achieve the desired outcome.

Penske were requested to utilise local Sydney vendors to minimise schedule impact. However, leveraging the experience of our partnership, we advised and were able to convince our customers, R. Moore & Sons was the best and only option to carry out this critical work. On delivery of the crankshaft they recognised why we choose to partner with R. Moore & Sons.

Our internal customers commented that they were extremely impressed by the excellent quality of work and timing. Our Defence customer expressed gratitude and admiration for delivering the project on time and with the highest quality. Returning the engine to full operational status has facilitated HMAS Hobart's to execute her role in a regional deployment that has significant strategic implications for Australia without compromise.

The team at R. Moore & Sons has continued the strong tradition of providing industry leading technical knowledge, experience and professionalism. Like us you can be extremely proud of the team's incredible success in the accomplishment of this project.

Sincerely,

Ryan Buchanan
Defence Project Manager

Greg Dobe
General Manager
Remanufacturing & Production
